

21ST CENTURY SCHOOL
Workshop Series
BY 21CLI & 407 LEARNING

Cyber Security for Schools - Why the Education Sector is a Prime Target for Hackers and How to Protect your Community

WHEN

Tuesday, 28 September 2021
15:00 to 17:00 (HK Time / GMT +8)

PRICE

\$199USD For two places
\$350USD For three to five attendees
\$475USD For six to eight attendees
\$599USD For 9 or more attendees
\$75USD For video recording

In this workshop, delegates will learn the types of cyber attacks faced by schools and how to mitigate against them. Attendees will learn the fundamentals of carrying out an internal Cyber Vulnerability Assessment (CVA) in school, set to the backdrop of the increasing regularity of cyber attacks in education.

21st Century Schools face a variety of threats and it is critical that school leadership in partnership with technology leadership strategically plan to mitigate these threats in order to provide for a safe and secure learning environment.

In this workshop school teams will learn:

- The impact of recent attacks on different organisations globally
- The types of attacks that schools face and who is responsible for them
- Some recent examples within the education sector
- How would a hacker carry out research on a target/school and how educational institutions can carry out checks to ensure they are not vulnerable
- How a hacker would identify vulnerabilities and proceed to initiate an attack by way of a live walkthrough & simulation
- A range of CVA tools schools can use internally before turning to external consultants
- What checks should be conducted internally before engaging with external CVA consultants (See the event page for more)

This workshop is part of a series on
21st Century Schools.
